

WSL Setup

WSL guide

Enable WSL

- Open and run PowerShell as administrator
- Copy and paste the following commands when prompted:

```
dism.exe /online /enable-feature /featurename:Microsoft-Windows-Subsystem-Linux /all /norestart
```

```
dism.exe /online /enable-feature /featurename:VirtualMachinePlatform /all /norestart
```

Enable WSL

- Restart your laptop / machine.
- Open back up PowerShell as administrator and run the following:

```
wsl.exe --install  
wsl --set-default-version 2
```

Ubuntu Distro

- Open up PowerShell and run as administrator.
- Copy and paste the following when prompted:

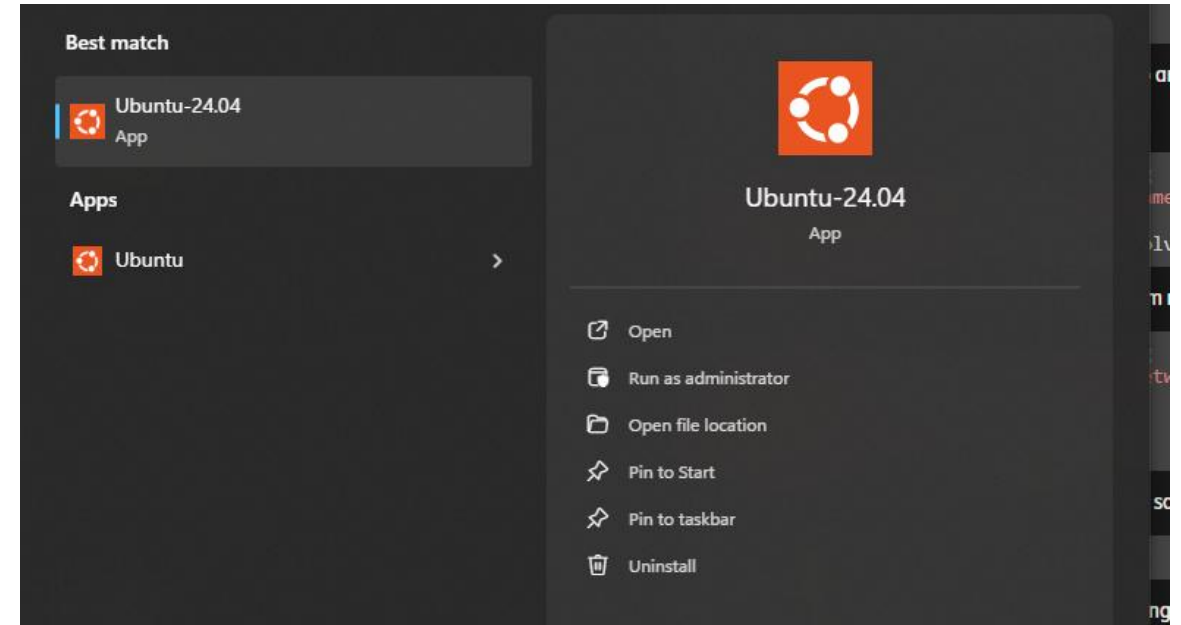

```
wsl --list --online  
wsl --install -d Ubuntu-24.04
```

- When asked for a username use your Ericsson signum.

Ubuntu Distro

- Look in your start menu for the newly installed Ubuntu distro and open it.
- Now we will need to change the DNS servers
- Copy and paste the following into Ubuntu:

```
config sudo rm -rf /etc/resolv.conf && echo 'nameserver 193.181.14.10  
nameserver 193.181.14.11  
nameserver 8.8.8.8' | sudo tee /etc/resolv.conf
```

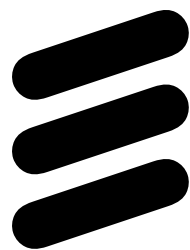

Ubuntu Distro

- Now we will need to change the wsl.conf file.
- Copy and paste the following in ubuntu:

```
sudo rm -rf /etc/wsl.conf && printf "[network]
generateResolvConf=false
[boot]
systemd=true" | sudo tee /etc/wsl.conf
```

- To check if it works try ping gerrit-gamma.gic.ericsson.se.

```
ping gerrit-gamma.gic.ericsson.se
```
